

How to be accurate with Archery

The key to accuracy is form and consistency! You must draw your bow the exact same way everytime, and release the same way everytime. Once arrow is drawn, with bow arm straight, drawing arm in line with bow arm, finger at anchor point - then release arrow! At release, the only thing that moves is the arrow and your 3 fingers releasing the string = don't move until the arrow hits your target! Practice form until you can do it without thinking! Then - you are on your way to becoming an archer!
